EDUCATION

Vellore Institute of Technology (VIT)

CGPA: 9.06

Bachelor of Technology in Computer Science and Engineering

Hebron Higher Secondary School

Percentage: 81.69%

Higher Secondary Certificate (HSC) - Science

EXPERIENCE

AI/ML Developer

May 2026 – Current

Scanbo

Mumbai, Maharashtra

- Building Dignera Forge and Scanbo Studio, an agentic AI platform for healthcare that combines RAG, GraphRAG, knowledge graphs, and multi-agent reasoning to deliver clinically grounded decision support and workflow automation.
- Engineered scalable knowledge and compliance systems including protocol matching, clinical reasoning pipelines, regulatory guardrails, and secure healthcare data orchestration for enterprise-grade AI applications.

Software(AI) developer

Feb 2025 – May 2026

Catalyst-Partners

Ahmedabad, Gujarat

- Built an **LLM-powered backtesting and trading intelligence engine** that combined prompt-engineered strategies, historical market data, and real-time market feeds to evaluate, rank, and execute trading decisions through autonomous decision workflows.
- Designed and developed **Agentic AI and knowledge retrieval systems** using RAG architectures, tool-calling agents, vector search, and reasoning workflows, enabling intelligent matching, contextual information retrieval, and multi-step decision automation across enterprise data sources.

CoFounder and Product Developer

Jan 2024 – Jan 2025

MediSynch

Chennai, TamilNadu

- Built MediFlow, an AI-powered healthcare platform connecting blood banks, donors, and hospitals, enabling predictive donor matching, real-time inventory tracking, and automated emergency coordination.
- Designed to address India's 4M-unit annual blood shortage by creating an intelligent, unified ecosystem for faster, more efficient blood supply management.

PROJECTS

GenAI UHI Mitigation Model | *Python, Gemini, TabPFN, Statistical calculation, xarray, rioxarray, geopandas*

- Engineered a GenAI-powered UHI mitigation platform (Python/Gemini) analyzing Sentinel-2, NASADEM (elevation), and weather data to predict UHI index using TabPFN (generalizable) or XGBoost (city-specific).
- Leveraged xarray, rioxarray, and geopandas for geospatial data processing and feature calculation (NDVI, NDBI), providing a foundation for localized UHI driver understanding.
- Utilized SHAP for ML model interpretability, enabling AI-driven, actionable suggestions for UHI mitigation based on identified surface characteristics and atmospheric conditions.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, C++, JavaScript

Technologies and Tools: AI Agents, Agentic AI, Large Language Models (LLMs), Retrieval Augmented Generation (RAG), Model Context Protocol (MCP), LangChain, LangGraph, Prompt Engineering, Vector Databases, Semantic Search, FastAPI, Data Engineering, Machine Learning, XGBoost, LSTM, Linear Regression, Node.js, Next.js, React.js, HTML, CSS

Soft Skills: Communication, Presentation, Team Leadership, Strategic Planning

CERTIFICATIONS

- Model Context Protocol: Advanced Topics
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
- Anthropic Introduction to Model Context Protocol
- Data Analytics with Python
